IDEMIA
Identity Platform

The IDEMIA Identity Platform is a universal platform for secure and trusted digital identity proofing, management, and authentication.

IDEMIA Identity Platform

We live in a world where the physical and digital converge, and where being identified digitally is becoming an integral part of our daily lives. The IDEMIA Identity Platform is a powerful solution for enterprises and service providers to identify, manage and authenticate digital identities in a secure, trusted and convenient manner.

Identity Proofing

The Identity Proofing Platform performs identity proofing and verification for enterprises that need to know, trust and verify the identities claimed by customers. Proofing is done using biometric capture and document capture using either dedicated hardware or a user's smartphone. Biometric and document data is then extracted and verified against one another or a trusted data source such as a national database or system of record.

Root of Trust Checks

Identity Management

The Identity Management Platform offers enterprises the ability to create, store and authenticate digital identities with a high level of security. The platform offers workflow management to perform continuous biometric data deduplication, identity attribute enrichment and aggregation, compliance and watchlist checks, manual adjudication services, and more, through the ID orchestrator and its universal API connector.

Identity Authentication

Secure customer authentication is essential for establishing trust. Identity Authentication enables biometric authentication through a variety of channels including a lightweight SDK[1] for native integration. For a higher level of assurance and frictionless user experience, the platform offers a policy manager and step-up authentication services.

Identity Access Platform

Identity access management is critical to business operations. Our Identity Access Platform gives enterprises the ability to manage identity related operations for secure access using biometric authentication solutions, 2FA login, attendance management and visitor management - all enhanced with biometrics for next-level security and assurance.
